

## NEXTLINK receives prestigious award for its new INVISIO product line

### **Copenhagen November 14, 2006**

Nextlink, a technology leading company for headsets to the professional as well as the consumer market, today announces that it has been selected as an Innovations honoree in the Wireless Communications category at the upcoming CES – Consumer Electronics Show 2007 in Las Vegas during January 8-11<sup>th</sup>.

“We are very excited about receiving this award” says Andrew L. Berman, CEO of NEXTLINK. “We know that we have a very strong and innovative product line coming up, but it is of course a great honor to be selected as an Innovations honoree at CES”

The award is for Nextlink’s new INVISIO product line for the consumer market:

### **INVISIO Q7:**

The INVISIO Q7 is the ultimate wireless communication device for windy, noisy or very quiet environments. It uses Bone Conduction Technology developed for and used by SWAT Teams and Military Special Forces Units across the globe.

The three button interface controls the functionality of the headset. The rechargeable Li-ion battery provides up to 6 hours talk time and 500 hours of standby time. When on-the-go, the supplied USB Travel Adapter connects the headset to a computer for charging.

The unique user exchangeable Soft Spring adapts perfectly to the contours of the ear, allowing easy use of eye wear and a supreme comfort.

INVISIO Q7 supports both Bluetooth® V.1.1 and V.1.2 with Headset and Handsfree profiles making it compatible with all Bluetooth® enabled mobile phones on the market.

### **INVISIO G5:**

The INVISIO G5 is a very small and discreet wireless headset with a weight of less than 6 grams. It is 3,3 cm long and 1,6 cm wide, making the INVISIO G5 the lightest and smallest Bluetooth® enabled headset in the world.

The sleek and refined design, reminiscent of cutting-edge military technology, reflects the INVISIO history as a trusted source of communications headsets for SWAT teams and Military Special Forces Units around the world.

The three button interface controls the functionality of the headset. The rechargeable Li-ion battery provides up to 4 hours talk time and 250 hours of standby time. The INVISIO G5 includes a revolutionary carrying case, that not only protects the headset when stowed in a pocket or bag, but also charges the headset up to an additional 5 times while on-the-go. This brings the talk time up to 20 hours.

The unique Soft Spring adapts perfectly to the contours of the ear, allowing easy use of eye wear and supreme comfort. The Soft Spring is user exchangeable and can be adjusted to accommodate either left or right ear usage.

INVISIO G5 supports both Bluetooth® V.1.1 and V.1.2 with Headset and Handsfree profiles, making it compatible with all Bluetooth® enabled mobile phones on the market.

The new product line will be displayed during the 2007 International CES, January 8-11, 2007 in Las Vegas, NV at the Innovations 2007 Showcase, booth #68747, Innovations Plus at the Sands Expo and Convention Center.

#### **About INVISIO**

INVISIO has in a few years grown to become the worlds leading brand of headsets for very demanding professional users and with a strong position in the consumer market as well. INVISIO headsets are used by SWAT Teams and Military Special Forces around the globe.

INVISIO headsets use the patented Bone Conductive Technology. Sound, in the form of vibration transmitted through the jawbone, is picked up inside the ear by the patented INVISIO Bone Conductive Microphone. Because the speech signal is not passed through the air, ambient noise is effectively eliminated. Combined with echo and noise cancellation digital signal processing (DSP), INVISIO is the ultimate headset for use all sound environments – quiet, windy or noisy.

INVISIO is a trademark of NEXTLINK A/S ([www.nextlink.se](http://www.nextlink.se))

#### **About NEXTLINK:**

Nextlink is a company at the forefront of the global communications market providing very innovative products and technologies to the consumer as well as the professional user. We develop and market Headphones and Headsets for mobile phones and 2 – way radios based on corded and wireless technologies.

Nextlink was founded in 1999 and are the inventors of the patented Bone Conductive Technology for best possible speech in all sound environments and the also patented SoftSpring for optimal wearing comfort. Nextlink is headquartered in Copenhagen, Denmark and is listed on the Stockholm Stock Exchange ([www.nextlink.se](http://www.nextlink.se))
